# Asbestos Management Solution

Asbestos Module

For those serious about Asbestos Management

Micad's Internet Property Register (IPR) and acclaimed asbestos management module, intergrates intelligent CAD plans to show asbestos risk on drawings, allowing for an accuarate and up-to-date register to be maintained throughout the lifecycle of a buidling.

Used by Hospitals, Universities, Corporates and Local Authroities, Micad's Asbestos Management module allows those managing large propety porfolios, to fully manage their duty holder responsibilities and risks posed by asbestos in buildings.

The system provides managers with a full set of dashboard controls that indicate exact levels of data conformance, highlighting actions that are required to ensure a fully compliant dataset.
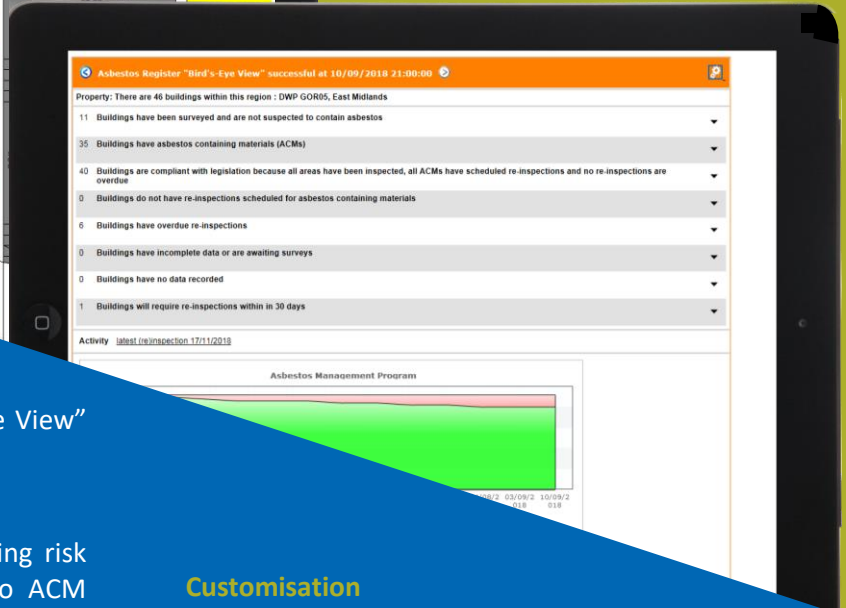

Key Benefits

- Reduces financial and operational risks
- Reduces long term asbestos management costs
- Promotes higher levels of compliance
- Full client ownership of data
- Benchmarks surveyors/consultants performance
- Standard and bespoke reporting of data
- Allows easy access to 3rd parties for in-putting data and viewing

Download on the App Store

Compliance Management

Complete compliance visibility via "Bird's Eye View" (BEV) dashboard and Management Console.

Graphic Displays

Can link directly to CAD, graphically displaying risk ratings on drawings with a click through to ACM sample information.

Asbestos Information Portal (AIP)

A portal option for dissemination of asbestos register information to 3rd parties in a read only format. This application can be accessed via mobile devices and includes access to key register information, drawings and crucially a log of access made by all users to the system.

Data Ownership

A client focused asbestos solution that is independent from consultants and contractors to ensure integrity and full ownership of data with reduced risk for maintaining the register over time.

Software Integration

An integrated solution that can link with all other Micad property management modules.

Customisation

Future proof through user customisation options that administrators can control within the application that includes an in-built automated QA function.

Live Data, Reports and Documents

Mobile data entry and re-inspections can be conducted using the miAsbestos App available in the App store.

Multiple report formats available with re-inspection flood fill update tool.

Risk assessment criteria in accordance with the HSE's HSG227 & HSG264.

Provides a home for policies, management plans and Remediation document in various file formats with the ability to make these available in the AIP.

Accessibility

Micad is a fully functional web-hosted system so you always have access to your data irrespective of which surveying company you use.
