# **Pro***Economy*

# The simple way to manage your water risk, whatever your Legionella control modality.

ProEconomy have been sampling water for the last 25 years. By using our experience and the latest technology to redefine water analysis we have developed Tetras, the cloud based water management system. We setup, barcode your sampling outlets and manage our Tetras Cloud based water management system. You just login for your real time results, trending and sample interrogation.

Let us take the stress out of your sampling, so you can concentrate on improving your water quality.

## A national company with a local focus

Despite being utilised by some of the largest organisations across the UK and Europe, we have regionally based samplers so you can be confident that we are local to you.

John Radcliffe Hospital NHS Trust

Royal Free London NHS Trust

#### What is Tetras?

Tetras is ProEconomy's cloud-based water management system that is revolutionising the way water samples are tracked and analysed.

Tetras uses cutting edge technology combined with the latest lab sample management systems to enable you to login via our website portal to view where and when water samples are taken and to see the lab results as soon as they become available. Consequently, water issues are easier to identify, and users can manage Legionella risk more conveniently.

The tetras package is easy to use and requires no set-up time, and can be used with minimal training, provided by ProEconomy.

#### **Pro***Economy*

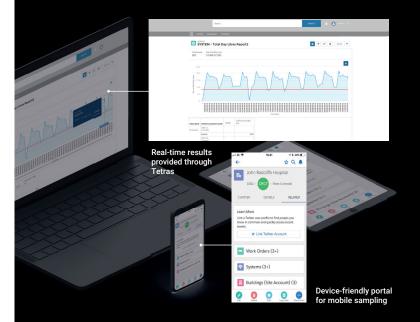

#### Confidently compliant

Our expert samplers are all City and Guilds accredited and have years of experience and training so you can be confident that you're in the right hands.

ProEconomy use external UKAS approved laboratories who have the ability to provide analysis for Legionella, Pseudomonas, TVC's, Ecoli, Coliforms as well as new and emerging pathogens.

To ensure compliance and peace of mind, for Legionella analysis, samples are taken following the BS7592:2008 standard, as well as those for Pseudomonas aeruginosa analysis following the HTM04-01, 2016 recommendations. Temperatures at the outlets are always recorded by ProEconomy's technicians whenever samples are taken.

### Why should you use Tetras?

- The goal of Tetras is to combine what the water hygiene technician observes in the field with the lab water analysis results in one easy to use system.
- > Tetras is an uncomplicated, robust system which is easy to implement, easy to understand and easy to modify.
- The system employs tools that facilities and Estates professionals are familiar with, such as barcodes, Excel and email. Tetras uses Delphi programming language and utilises XML and CSV files format, making it easily programmable by hospital IT staff.
- > Existing outlet barcodes can be integrated to ensure you don't have an array of outlet indicators.
- Our team of water quality analysts are available Contingency plans are available to help ensure your compliance on site – determining your little used outlets and helping with targeted flushing guidance.

Our sampling prices are including and not limited to the below pathogens.

Pathogens	Price per sample
Legionella	£20 *
Pseudomonas Aeruginosa	£20 *
EColi	£20 *
Coliforms	£20 *
TVC's @ 22 & 37 degrees	£20 *

 $\mbox{\ensuremath{^{\star}}}\mbox{\ensuremath{\text{Tetras}}}$  is included within our water sampling prices
