

EntoliTM

Operating Room Control Platform

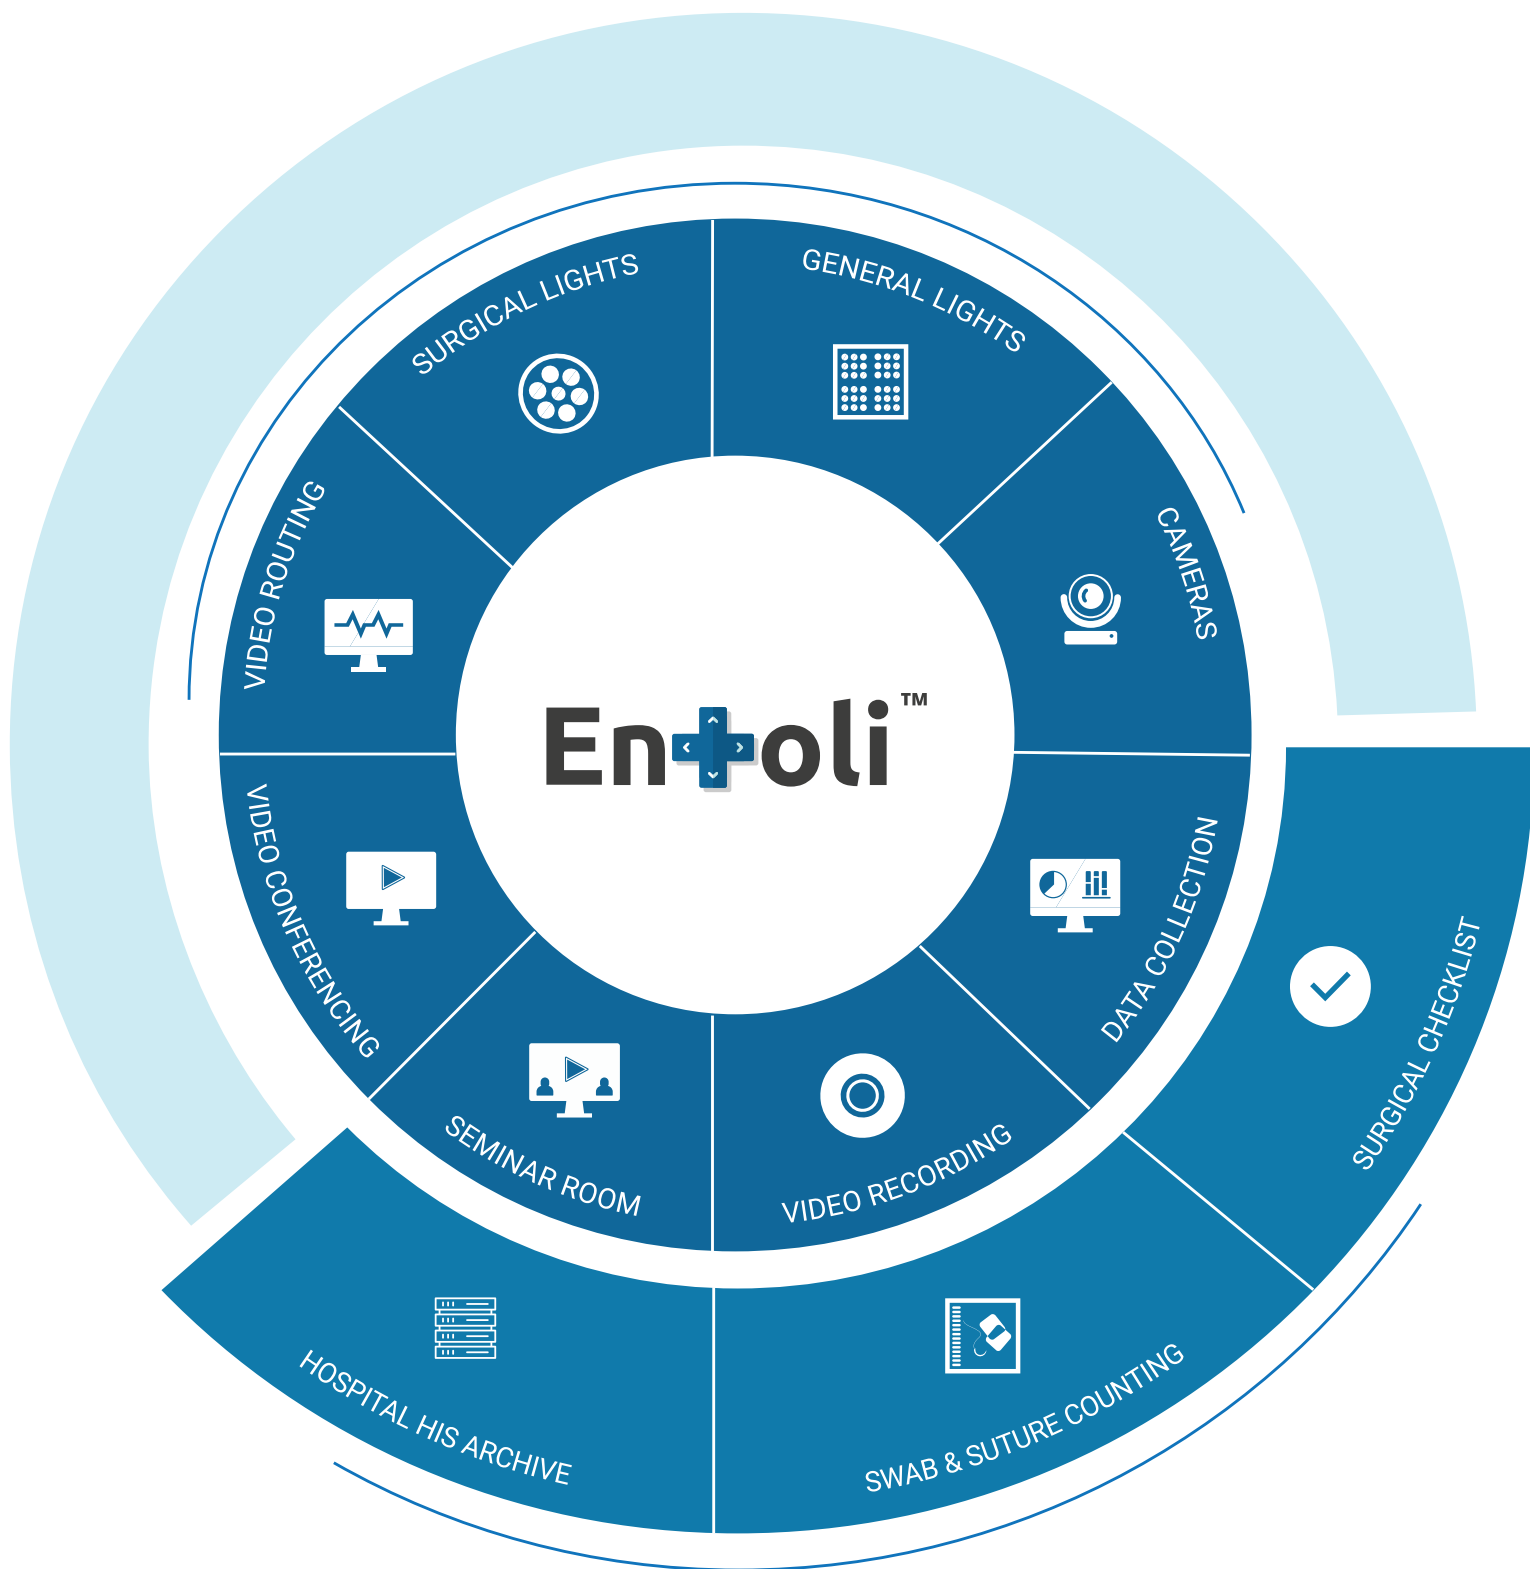

“Entoli™ Medical Control” is an OR Control Platform that enables clinicians quick and easy setup before procedures and a simple touch interface for control during surgery.

Entoli brings simplicity to complex technology with an upgradeable **‘buy what you need’** model. With this model an Entoli OR can have features added easily as the need arises.

Entoli was created by a team that includes Medical Installation Professionals, Professors of Surgery, Audio Visual Integrators and Agile Software Developers.

Entoli brings together **expert knowledge** in all these areas for integration in the control App.

Entoli™

Entoli Medical can help partners and hospitals implement software control and hardware audio visual solutions in a variety of ways. From supply only to full support we can deliver successful projects that delight clinical users.

Pre-Sales Support & Design

Entoli can help generate a bill of materials and system design that fulfils any specification or tender. We can assist in interpreting technical documentation and turning it into a meaningful system for end users.

Pre-Installation Configuration

Entoli can pre-configure and ship equipment globally for 'plug and play' installation, down to supply of terminated labelled cables, conduits and medical housings. You buy, ship to us and we take care of the rest.

Hardware Supply

Entoli can supply hardware for all solutions and ship globally pre-configured as above, for a full service export solution.

On-Site Engineer Support

Entoli can deploy engineers globally for real time support of local teams and provision of specialist software and hardware knowledge. Our engineers always make sure local teams are included in all aspects of decision and 'train as they go' in new features to leave local teams better prepared.

Turn-key Installation

Entoli can provide a full solution package to partners who need extra resource or a little help with extra industry related skills. Entoli work with local partners to design, tender and deliver a full project installation.

Installation Support

Entoli can provide remote or local support by way of technical guidance, project management and configuration of equipment.

Software Updates

All customers who subscribe to support receive free of charge updates to their software as well as the remote support service. As new features are added and updates are made available each software module can be upgraded to benefit.

Remote Support

The Entoli support desk operates from our European base and is available to engineers and end users for technical questions, troubleshooting and configuration. Entoli installations usually stipulate some level of remote connection so our support desk can resolve issues with the minimum of on-site assistance.

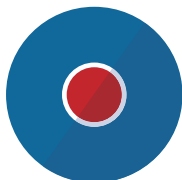

Entoli Medical Control, Video Only App

- ✓ Video Switching & Routing
- ✓ Cameras

Entoli Medical Control, Integration Now App

- ✓ Video Switching & Routing
- ✓ General/Overhead Lighting
- ✓ Surgical Light
- ✓ Cameras
- ✓ Basic Video Conference (webcam)
- ✓ Music
- ✓ Timers

Recording Module+

- ✓ 4K Image Capture
- ✓ Capture stills with foot pedal or endoscope buttons
- ✓ Edit and Delete
- ✓ Add to DICOM package for collection by HIS

Video Conference Module+

- ✓ Professional VC to 25 end points
- ✓ Control and authorise surgical video feeds for transmission
- ✓ Invite & schedule from the OR

+ Features described may rely on particular hardware

Meeting Room Module⁺⁺

- ✓ Control video feeds from multiple OR's
- ✓ Operate PJlink Projectors, Samsung and LG large format screens
- ✓ Set PIP, PBB, Quad and other layouts
- ✓ Control audio to and from the OR

Swab & Tool Module

- ✓ Track & count user of swabs & tools
- ✓ Edit listing of items in the cloud or locally
- ✓ Create a report to attach to the EPR¹

Surgical Checklist Module

- ✓ Operate the WHO surgical checklist electronically
- ✓ Edit checklist items in the cloud or locally
- ✓ Create a report to attach to the EPR¹

Data Analysis Module

- ✓ Collect and save data from sensors
- ✓ View charted data locally
Save data to the cloud
- ✓ View an OR suite dashboard on the cloud
- ✓ Create a report to attach to the EPR¹

* Requires specific video routing hardware

+ Features described may rely on particular hardware

¹ Requires recording module
