

Developing the Healthcare EFM workforce - A Partnership Approach

In March 2021 IHEEM & HEFMA released their [Joint Workforce Strategy document](#) that sets out several long-term objectives that support all members in their career development across the many and varied roles within the Healthcare Estates and Facilities sector. This event focuses on the new joint strategy, it will discuss the current challenges facing the industry including; staff turnover, mental health and wellbeing, and training and development as well as the positive steps that both organisations are working towards to improve what is available, such as the national apprenticeship programme and the development of joint resources such as the future leaders career map. Attendees will gain a better understanding of how to improve visibility, development, retention, and diversity within the EFM workforce, and the importance of encouraging and supporting future leaders in the sector.
