

## Electrical Training Authorised person LV (HTM 06-02) refresher

We deliver both **high voltage (HV)** and **low voltage (LV)** training for Competent and Authorised Persons, plus safety testing, **electrical** installations and conversion from mechanical to **electrical** engineering.

### Is this course for you?

This course is for Authorised Persons (LV) who have successfully completed a full AP low voltage electrical course and who require an update.

The course builds upon previous training experience and updates you with recent changes in the field and current case studies. Prior knowledge and training is essential.

### How often should I complete this refresher training?

HTM 06-02 states that Authorised Persons should undertake refresher training every three years.

### Course aim

To refresh the skills and knowledge required as an Authorised Person, meeting the requirements of HTM 06-02 and the Electricity at Work Regulations 1989.

### Objectives

- State the key contents of HTM 06-02 and the reasoning behind the contents
- State other working documents relative to HTM 06-02 and the role of the Authorised Person (LV)
- Describe the roles and duties of the Authorised Person (LV)
- Describe the typical components and their function within a typical low voltage distribution system and how safe working is achieved in various parts of the distribution
- State the safe working procedures required for both dead and live work in accordance with HTM 06-02
- Describe how electrical work should be monitored to maintain safe systems of work
- Identify & complete correct safety documentation to be utilised for a variety of practical applications
- Identify any relevant changes in industry standards and legislation that have occurred since previous training
