ZARGES digital locking system: Simply more secure.

Digital locking systems for hospitals – an overview.

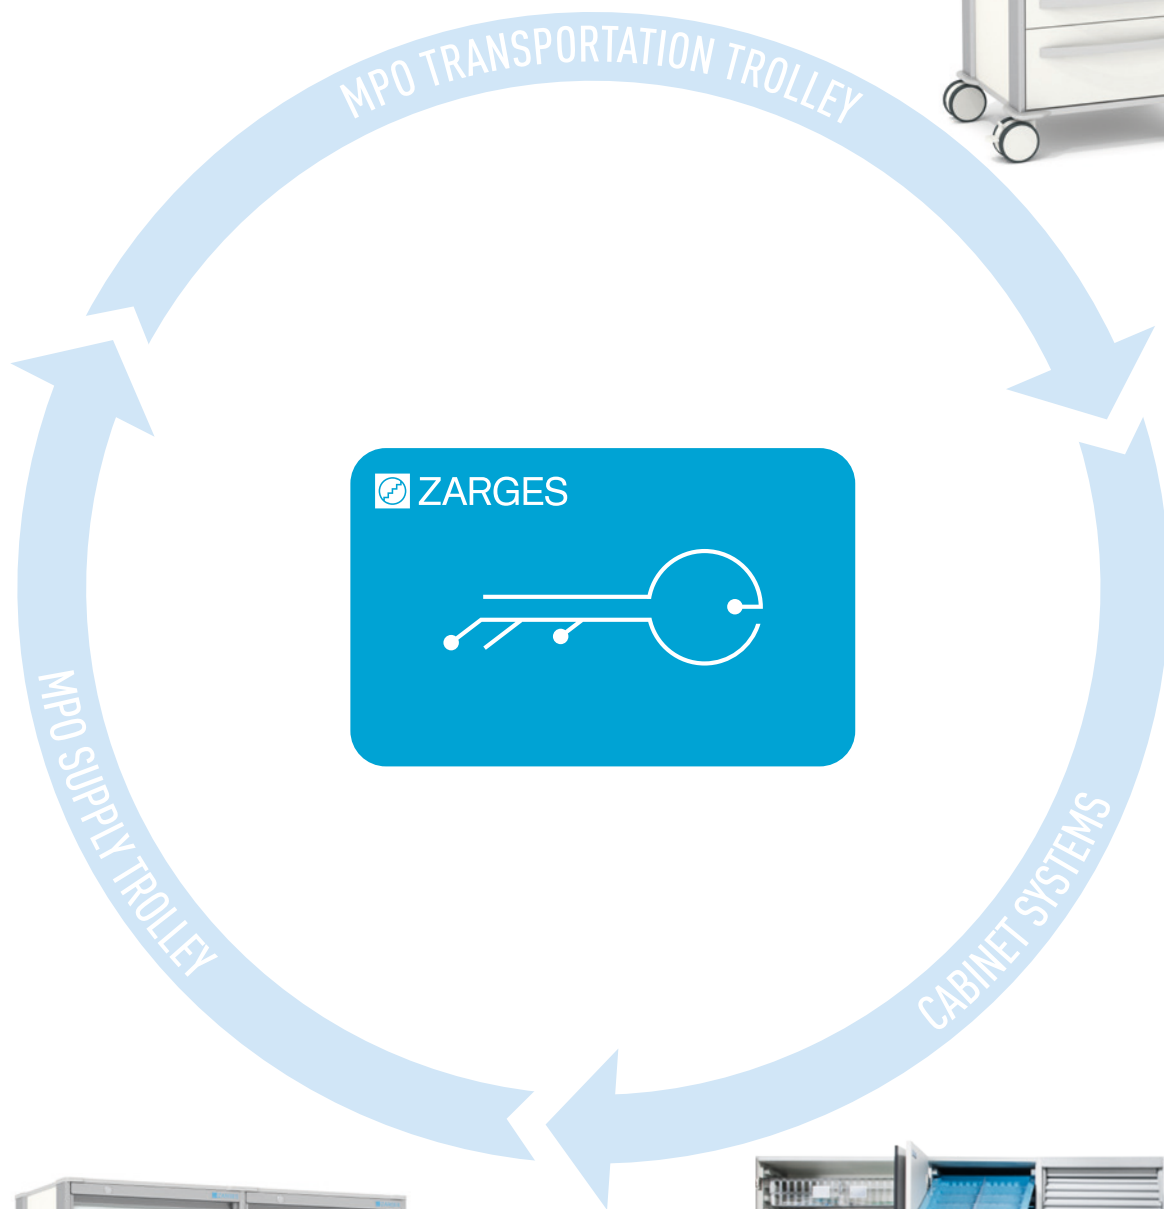

Customised ZARGES locking solutions for your application.

-  Package 1 "Standalone solution"
Independent of software, e.g. suitable for pharmacies
-  Package 2 "Island solution"
For use across several departments
-  Package 3 "All-in-one solution"
Complete package for all departments

Many systems, one solution.

Digital locking systems – impeccable security for any requirement.

Digitisation of work processes is currently also ongoing at healthcare facilities. Exceptionally stringent requirements are placed on security and control. ZARGES is your reliable partner in this field – offering everything from open full solutions covering all departments, to small standalone solutions. From now on, we can equip our MPO transportation trolleys, MPO supply trolleys and cabinet systems with digital locks, with more products to follow. What's more: existing systems can simply be upgraded.

Our solution to meet your needs.

- Our digital locking systems are open solutions. This means existing systems and key cards can be integrated without any issues.
- Effortless installation and commissioning.
- All essential information and access rights are stored on a key card.
- Scalable according to needs and organisation size – from simple solutions that operate without software to software-enabled full solutions.
- Activity logging can be enabled.
- Existing locking systems and key cards can continue to be used.

Packages

Package 1 "Standalone solution"

The lock can be programmed using a master card without any software – this solution is suitable for small buildings. Any changes to the locking system (for example, in the event of the loss of a key card) must be made directly on the lock itself. The system can be retrofitted with programming capability and software at any time.

Package 2 "Island solution"

The solution for greater overview: A smart software application is used to allow programming to be done using a laptop. Data is transferred using a wireless communication device or an update terminal. The locks are not integrated into the overall access control.

Package 3 "All-in-one solution"

The comprehensive solution: A terminal is used to ensure individual staff members always have up-to-date access rights; in the ideal case, this should be combined with access control or time tracking. Data is stored on a key card and transmitted to the terminal at the end of a workday. This allows you to retrace who has used which cabinet.

ZARGES –
 Access.
 Packaging,
 transportation,
 special solutions.

For more than 85 years, the brand name ZARGES has been synonymous with premium quality and continuous innovation. As an innovation leader, we are constantly improving our range and creating solutions and products that are consistently tailored to your needs. And good ideas always come from closely working together with you, the customer.

Our aim is to always provide you, the professional, with the right solution for any requirement. For your safety and efficiency.
