

Decontamination Authorised Person (to NHS guidance)

Our **decontamination** training providers learners with hands-on experience across a wide range of equipment within our specialist **decontamination** facility.

Is this course for you?

This programme is suited for individuals currently in a management position dealing with engineering aspects of an organisation's decontamination equipment and day to day operational management. It would also be applicable to the Competent Person (Decontamination), CP (D), wishing to progress their career.

Course aim

To enable the AP(D) to perform day-to-day operational duties and to be effective in the management of engineering aspects of an organisation's decontamination equipment.

Objectives

- Explain and use relevant guidance and standards for decontamination equipment
- Explain the procedures for risk management, risk assessment and safe systems of work, including permits to work and adverse incident reporting
- Explain the role of the AP(D) and describe their relationship to other roles in the management of decontamination
- Demonstrate internal auditing of periodic test reports in conjunction with contract requirements
- Explain how to procure equipment and manage through-life support
- Identify acceptance criteria for the installation, operational and performance qualification testing to relevant specifications
- Reflect on current role and responsibilities
- State the importance of being accountable and responsible for their role
- List the consequences of non-compliance within own area of responsibility
- Explain the value of good policies, processes and procedures and list how these protect the organisation and individuals
- Identify the financial risks associated with short term-ism

Pre-requisites

This course assumes knowledge and experience of periodic testing of washer disinfectors and sterilizers prior to attending.

50+ years of world-class training
