

## Decontamination Washer disinfectors - weekly testing (to NHS guidance)

Our **decontamination** training provides learners with hands-on experience across a wide range of equipment within our specialist **decontamination** facility.

### Is this course for you?

This course is for healthcare staff required to operate and/or weekly test surgical washer disinfectors using thermal disinfection.

### Course aim

This course will provide you with the knowledge and skills to complete routine checks and verification tests required within a weekly period on surgical washer disinfectors using thermal disinfection.

Note: This training does not override local protocols for production processing or manufacturer/supplier obligation to provide adequate instruction for equipment operation.

### Objectives

- Identify the general safety hazards and potential failures associated with re-usable surgical instrument washer disinfecter equipment and operational processes within decontamination
- Explain the necessary functions of both equipment and personnel required to ensure safe and satisfactory washing and thermal disinfection of surgical instruments
- Demonstrate the actions required to complete weekly testing specified under NHS guidance for surgical instrument washer disinfectors

50+ years of world-class training
