DIGITAL SOLUTIONS FOR HEALTHCARE ENVIRONMENTS

Water is crucial for delivering safe and effective patient care, however the frequency of water-borne diseases is rising annually. Digital solutions can transform water management in healthcare environments and improve patient outcomes. **Rada's water delivery systems are at the frontline of infection prevention and reduce the risk of healthcare associated infections, which cost the NHS £2.1 billion per year.**

Rada's technologies improve environmental and financial efficiency. Our products enhance the health and wellbeing of patients and staff by optimising their safety in the fight against infections and help our partners to manage the water delivery challenges of now and tomorrow.

- **Designing the future of digital water delivery** through digitally connected and networkable solutions which enable hospitals to save resources and money.
- **Prioritising safety and infection prevention** through engineering which reduces the build-up of harmful bacteria and prevents cross-contamination.
- **Increasing efficiency and sustainability** by driving year-on-year reductions in energy and water consumption, meeting NHS ambitions of using innovative technology to reduce the environmental footprint.
- **Driving innovation and supporting society** by enhancing safety and quality in healthcare, fundamental for improving the overall health of the country.

As the healthcare sector looks to digitise estates and build new, smart hospitals, embracing innovation in water management will be pivotal for driving effective change.

DELIVERING THE BEST OUTCOMES

Rada's technologies are an investment in the future of healthcare delivery, supporting long-term sustainability for the health service.

JOINING THE FIGHT AGAINST COVID VITAL SUPPORT FOR NHS NIGHTINGALE HOSPITALS

Rada recommended and installed its leading Safetherm tap in the Nightingale Hospitals. Safetherm is a thermostatic clinical tap that improves bacterial and infection control and promotes user safety. It provides precise temperature control, so water is delivered at optimum temperature for handwashing. The tap's spout design also minimises residual water surfaces, where harmful bacteria can grow.

When lockdown hit, Rada kept its manufacturing line operational, rapidly putting in place new social distancing guidelines. Rada also worked closely with its own supply chain partners to ensure key components remained available.

GIVING PEACE OF MIND WHEN STAFF AND PATIENTS NEED IT MOST

Birmingham Children's Hospital is a leading UK specialist paediatric centre, treating 90,000 children every year.

The Rada Sense Tap meets the twin demands of bacterial control and user safety. The thermostatic sensor provides staff with the confidence that water will always be delivered at a safe pre-set temperature at the point of use. This is particularly important for improving the safety of young and vulnerable users.

DIGITAL WATER CONTROLS

Our innovative range of digital products are at the forefront of the future of hospital design, directly supporting the digitisation of NHS facilities and estates.

- **Reduce the risk of waterborne infections** with duty flush and thermal disinfection options
- **Limit opportunities for cross-contamination** through non touch controls
- **Smart duty flushing** removes the risk of human error and saves water
- **Collect key statistical data** on usage patterns and compliance with national guidelines
- **Manage water usage** with pre-set temperatures and flow
- **Whole life costs** reduced through service guarantees

MECHANICAL AND ELECTRONIC WATER CONTROLS

Leading taps, showers and water controls that meet the requirements of every healthcare facility.

- **Withstand heavy usage**, through reliable and durable designs
- **Support healthcare facilities** to manage water usage through regulated flows
- **Keep patients and staff safe** with cool touch technology
- **Easy to use**, maintain and clean with varied installation options and flexible settings
