

High quality, technically advanced, clinical infrastructure, delivered at pace

We're excited to be presenting at the Southern Branch IHEEM Meeting during which we will aim to demonstrate how our facilities are designed to optimise patient care and maximise efficiency and how Vanguard theatres and other facilities are currently being used by NHS Trusts to reduce waiting lists for elective surgery, support planned refurbishments and ease winter pressures.

Offering mobile and modular operating theatre facilities enables us to tailor a solution to your requirements. Our operating theatres or endoscopy facilities can be connected to other mobile or modular facility types, including wards. With NHS estates in need of essential refurbishment or expansion, Vanguard offer a contingency development package to customers so that plans and infrastructure can be put in place to act quickly and effectively to shield clinical capacity for planned or unplanned projects.

Vanguard Healthcare Spaces have provided hospitals across the UK with clinical capacity for a range of general and specialist surgical specialisms including maternity, endoscopy, ophthalmology, orthopaedic joint replacement and revisions, cardiovascular, spinal, and gynaecological procedures.
